

## Generate Table cards on chess-results.com

Last update 1.11.2024, Author Heinz Herzog

With Swiss-Manager menu „Internet / Customize lists on chess-results.com“ you open a dialog that allows the organizer to customize the lists and generate Table-Cards, Pairing-Cards and Matchreports as Excel or PDF-File.

### How to do:

#### 1) In Swiss-Manager: Click Menu „Internet / Customize lists on chess-results.com“

The following form is displayed (scroll below):

The screenshot shows a web interface for generating table cards. At the top, there are options for 'Points / MP in teampairing list' and 'Die besten Spieler nach Punkten/Eloperformance/Prozent' with checkboxes. A SID is displayed as '7BAD05A0AB68AA50CFF0F374E04E0945 / FE2AD148160D'. Below this, the 'Table cards' section contains several buttons: 'Generate Table cards (Excel)', 'Generate Table cards (PDF)', and a red-bordered button 'Help generate Table cards'. There are also buttons for 'Datei auswählen' (with the text 'Keine Datei ausgewählt'), 'Upload Excel-template', and 'Download Excel-template'. The 'Pairing-Cards' section is partially visible at the bottom.

With „**Help generate Table cards**“ this pdf-file is displayed.

#### 2) If you have no template then select one of the examples:

- Example A4 with 2 Table-Cards per page

[Download Excel-template](#) [The generated A4 Table cards as PDF file](#)

- Example A5

[Download Excel-template](#) [The generated A5 Table cards as PDF file](#)

#### 3) Download the appropriate template and adapt it.

The following variables can be used:

Variable	Description
\$NOTINAM	Starting Rank + Title + Name
\$SNO	Starting Rank
\$TINAM	Title + Name
\$TIT	Title
\$NAM	Name
\$FED	Föderaton
\$RTG	Rating used
\$RTGI	Rating international
\$RTGN	Rating national
\$CLUB	Clubname

\$CLUBNO	Club number
\$TEAM	Teamname
\$TEAMNO	Team Starting Rank
\$NO_TEAM	Team Starting Rank + Teamname
\$BOARD	Boardnumber
\$FLAG	Flag is inserted as an image
\$FLAGL	Flag is inserted as an image rotated 90 degree left
\$FLAGR	Flag is inserted as an image rotated 90 degree right
\$CHESS-RESULTS	Homepage of the organiser + chess-results.com Homepage
\$END	<b>Important, defines the maximum rows and columns of the template</b>

After the Variable you have to add a number. The numbers can be from 1 to 6

If you want 2 Tablecards per page then you have to use \$NAM1 and \$NAM2

If you want only 1 Tablecard per page then all variables ends with 1: e.g. \$NAM1

**4) Click „Datei auswählen“ (=Select File, should be displayed in your language)**

**5) Upload Excel-template**

**6) Click „Generate Pairing-Cards (PDF or Excel)“**
